

# Welcome to ATEAS Security

IP Security Solution

The ATEAS Security software is a comprehensive video management solution for professional IP camera systems, which focuses on fully utilizing the camera potential and open standards. It brings extreme performance, simplicity and advanced features to your camera system.

SIMPLICITY

Regardless of the size of the camera system, the entire ATEAS Security platform will always consist of three basic applications. Therefore, large installations do not require any special software knowledge or skills. The ATEAS client can serve as an intuitive monitoring tool, as well as the application for remote administration of all servers or a fully automated video wall client.

PERFORMANCE

ATEAS is a high-performance and most efficient surveillance solution on the market. ATEAS implements many technologies to face all challenges in your camera system ranging from GPU acceleration for PC stations and mobile clients or a custom video database solution to a multi-core ready vehicle licence plate detection and recognition.

ADVANCED FEATURES

The central system administration includes hundreds of advanced features to satisfy specific customer needs and requirements. Advanced features are available on all access levels and include a distributed data protection model as well as complex and multi-server event handling scenarios.

OPENNESS

ATEAS is officially listed as an ONVIF compatible solution and can be used with all products declaring support for ONVIF standards. ATEAS can be seamlessly integrated with other systems using open communication standards as already proven in numerous integration projects with access control or enterprise information systems.
